RESEARCH EXPERIENCE

IonQ **Remote**
Research Mentee, Advised by Dr. Denny Dahl *08/2025−09/2025*

- Addressed the Instant Insanity problem on NISQ devices by employing a graph-theoretic encoding and a divide-and-conquer approach with two distinct post-processing methods.
- Applied a Variational Quantum Algorithm to the Four Corners Map Coloring problem.

The Pennsylvania State University **University Park, PA**
Undergraduate Researcher, Advised by Prof. Kiwan Maeng *08/2024−09/2025*

- Conducted in-depth GPU profiling with Nsight Compute and Nsight Systems to analyze performance bottlenecks and system-level overhead in differentially private training.
- Proposed an optimization that resolved the dominant Geometric operation overhead, reducing it from 50% to 19% while preserving Gaussian noise quality.

Arch Lab at SKKU **Suwon, South Korea**
Undergraduate Research Intern, Advised by Prof. Dongmoon Min *07/2025–08/2025*

- Built foundational expertise in Quantum / Cryogenic Computer Systems through literature reviews, technical presentations and academic defenses.
- Investigated quantum computer systems, including superconducting-qubit design, error mechanisms, control and readout techniques as well as cryogenic computer architectures.

POSTECH QCQN Lab **Pohang, South Korea**
Undergraduate Research Intern *01/2025*

- Performed 397 nm fluorescence (Doppler) and 729 nm quadrupole spectroscopy on Ca^+ ions and enhanced system stability through targeted adjustments.
- Implemented micromotion optimization via 2D scanning with DC compensation rods.
